robobrain® in a nutshell

Individually combine robobrain®

robobrain®: A control platform for robots based on true Artificial Intelligence - the brain that gives industrial robots intelligence. Automation processes can thus be implemented quickly, without expert knowledge and independent of manufacturers.

Expandable through different hardware components, as well as smart AI skills, robobrain® is the bases to create various solutions.

Expandable
One platform, extendable through soft and hardware components, as well as various AI skills.

Cost-efficient
No complex programming. AI skills provide the process intelligence needed.
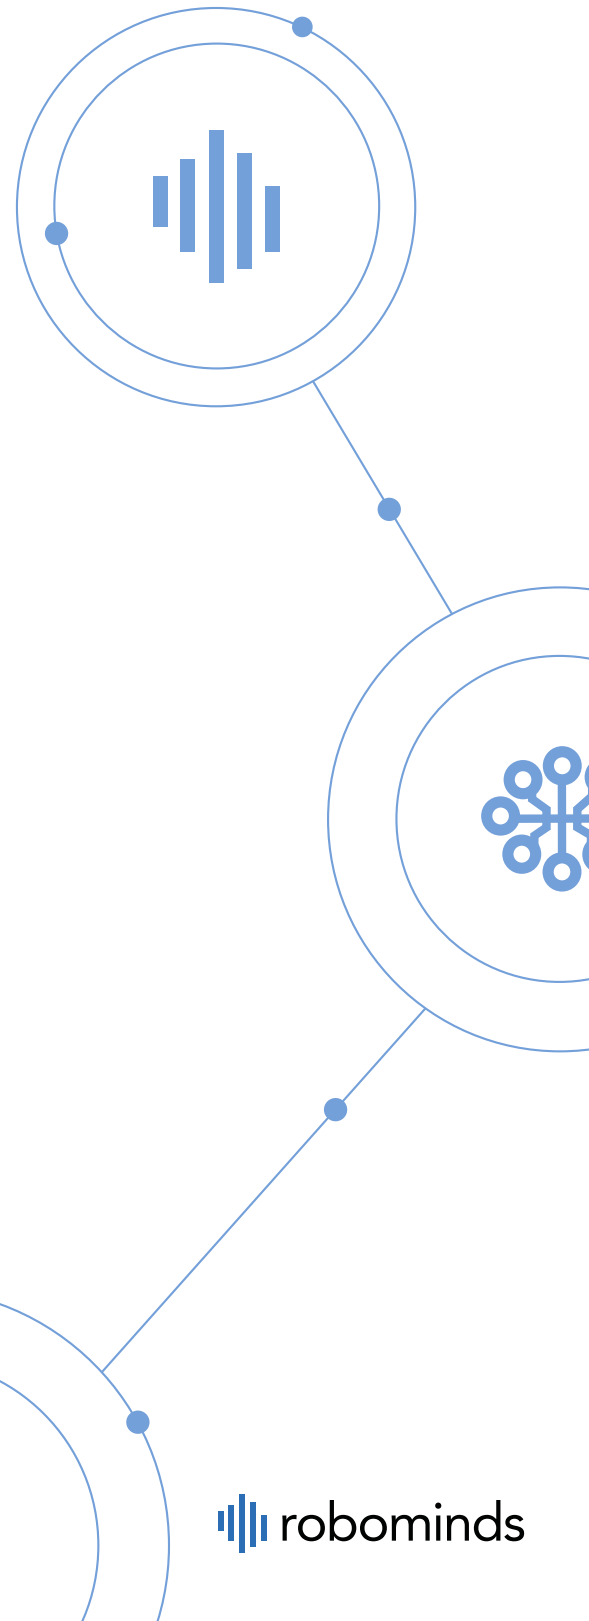

Reactiv
Robots can react independently to changes. Without renewed programming effort.
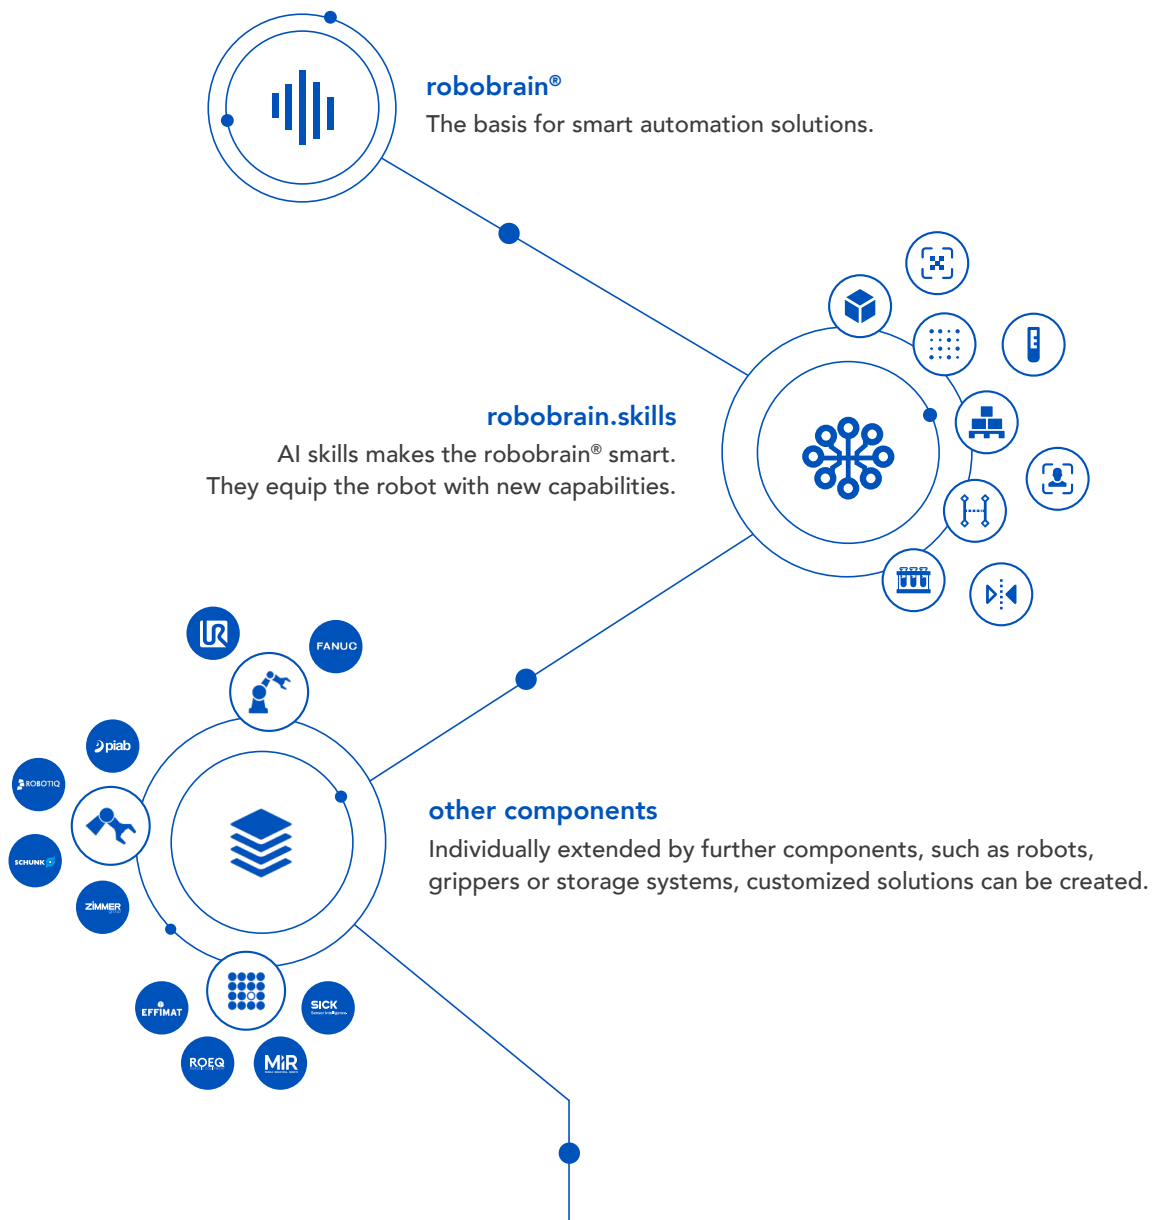

Easy-to-use
Robot integration becomes possible for everyone - no expert knowledge required.

Compatible
Manfacturer-independent interfaces to various software and hardware components.

ıllı robominds

One robobrain® - endless possibilities

robobrain®
The basis for smart automation solutions.

robobrain.skills
AI skills makes the robobrain® smart.
They equip the robot with new capabilities.

other components
Individually extended by further components, such as robots, grippers or storage systems, customized solutions can be created.

Interested in robobrain®?

We are looking forward to your request!
